Outlet Collector (channel)

Outlet Collector is closed rectangular reinforced concrete construction.

It is envisaged that each unit has separate collector that are connected in point P into the joint collector for all units.

From terminal chamber to stop gate valves collectors are square shaped with dimensions 2.3m x 2.3m.

From stop gate valves to entry to Mlava river collectors are rectangular with dimensions b: 2.5m a: 2m.

The bottom of the outlet collector has different descent and depending on the section of collector it is:

....
